

What System to Recommend for City Water

First, say to your customer:

We are expert plumbers; however, we also specialize in water quality improvement. Therefore, do you mind telling me . . .

1. Do you presently have any water quality concerns?
2. Do you suspect your tap water may not be safe?
3. Do you drink bottled water?
4. Do you see scale around your plumbing fixtures?
5. Soap build-up on shower doors and walls?
6. Do you have bad tastes or foul odors?

Then, on city water ask:

Do you want **filtered** water from every faucet?

Do you want **soft** water from every faucet?

Or do you want **both**?

Removes / reduces:

- Harmful chemicals
- Chlorine
- Heavy metals
- Bad tastes
- Foul odors
- Water hardness

COMBO-2-100

Two tank combination water softener and whole house filter.

BOTH

Softener & Filter
